

Workforce Summary: Non-Billable

Corporate and shared-services departments · Requisition snapshot as of September 8, 2026

Requisition Pipeline at a Glance

Metric	Count	Notes
Total open reqs	30	Across 10 departments
Open positions (headcount)	30	One position per requisition in this export
Pending starts (confirmed)	4	Accepted offers with a start date, in background / onboarding
Pending reqs (anticipated)	27	Backfill or new headcount not yet requisitioned
Total anticipated demand	57	Open reqs + pending reqs

Open Reqs by C-Suite Leader

Lynn Mettler

16

Jackie Britt

12

Anthony Spalitto

Heather Cullen

1

Lynn Mettler, Chief Product and Technology Officer, carries 16 of the 30 open reqs (53%). Pending reqs add 5 for Lynn Mettler, 22 for Jackie Britt. Leader is the C-Suite owner of the requisition's home department. Product now reports to the Chief Product and Technology Officer.

Key takeaway: Non-billable open requisitions rose 1 to 30 across 10 departments, but total anticipated demand fell 5 to 57 because pending reqs dropped 6 to 27 — demand converting into requisitions rather than growing. Ownership stays concentrated: Lynn Mettler, Chief Product and Technology Officer, holds 16 of the 30 open reqs (53%) across Product, Development, the two data functions, Quality & Release and Architecture & DevOps; Jackie Britt holds 12 (40%) in Implementation and Account Management and carries 22 of the 27 pending reqs. Committed supply improved slightly to 4 accepted starts, leaving net demand of 53 — 6 better than a week ago.

Source: 'Robert Data.xlsx' (tabs: OPEN nonHUB, Future Reqs Coming Per HMs, Pending Starts), snapshot as of September 8, 2026. Scope is non-billable only — every row on the OPEN nonHUB tab is flagged 'Is this a Billable Position? = No', which is the classifier used here. The export carries no executive or leader field, so the C-Suite split maps each requisition's home department to its C-Suite owner using the lookup in this report's data file; Product sits with Lynn Mettler, Chief Product and Technology Officer. Assignments other than Facilities & Admin are inferred from prior weeks' department roll-up owners — correct the lookup if any department has moved. This export has no pending-offers tab and no internal-moves tab, so those lines are not reported rather than reported as zero.

Pipeline Coverage

Non-billable open, anticipated and committed headcount · as of September 8, 2026

Coverage Build-Up		
Line Item	Total	Basis
Total open reqs	30	Currently requisitioned
Pending reqs (anticipated)	27	Not yet requisitioned
Total anticipated demand	57	Open reqs + pending reqs
Pending starts	4	Accepted, start date confirmed
Committed supply	4	Accepted starts with a confirmed date
Net demand after committed supply	53	Anticipated demand less accepted starts and moves

Key takeaway: Anticipated demand of 57 sits against committed supply of 4, leaving net demand of 53 — an improvement of 6 on the 59 carried a week ago, driven by pending reqs converting or dropping out rather than by hiring. Starts remain thin and late: 2 land September 14, 1 September 21 and 1 October 5, so there is still no non-billable onboarding in the first half of September.

Pending reqs are anticipated demand, not confirmed openings. No candidate pipeline or coverage ratio is available from this export, so this page is not comparable to the pipeline coverage ratios on the billable report. With no internal-moves tab, committed supply is accepted starts only.

Week-over-Week Trend

Non-billable requisition movement • Aug 31 vs. Sep 8

Week-over-Week Comparison				
Metric	Aug 31	Sep 8	Change	
Open reqs	29	30	+1	
Pending reqs (anticipated)	33	27	-6	
Total anticipated demand	62	57	-5	
Pending starts	3	4	+1	
Committed supply	3	4	+1	
Net demand after supply	59	53	-6	
Departments represented	9	10	+1	

Key takeaway: Demand eased for the first time in three weeks. Total anticipated demand fell 5 to 57 as pending reqs dropped 6 to 27 while open reqs rose 1 to 30 — the pipeline is converting, not expanding. Supply also improved marginally, starts up 1 to 4, so net demand after supply fell 6 to 53. Departments represented rose to 10 with Account Management appearing on the open list.

Both columns are recomputed by this toolkit from their own export — 'Weekly Numbers for Robert CPO Report.xlsx' for August 31 and 'Robert Data.xlsx' for September 8 — so the two weeks are measured on the same basis. Both weeks classify billable status from the explicit iCIMS flag. Departments represented rises from 9 to 10 because Account Management now carries open reqs.

Upcoming Starts — Breakdown

4 confirmed non-billable starts, by title and location · all confirmed starts in this export

Upcoming Starts by Title

Title	Type	Starts
.Net Tech Lead - high priority	New	1
CISO	New	1
Implementation Manager (prev req 8074)	Backfill	1
Vice President, Engineering	New	1
Total		4

Key takeaway: 4 non-billable starts are confirmed and none begin before September 14. Three are net-new senior or specialist appointments — Vice President, Engineering; a .Net Tech Lead flagged high priority; and a CISO joining via contractor conversion — with one Implementation Manager backfill. All four are remote. The cohort is small but weighted to leadership roles rather than volume backfill.

Open Positions — Breakdown

30 open non-billable requisitions, by title and department · 30 positions across those reqs

Open Reqs by Title

Title	Department	Open
Implementation Manager	Project Management Org	6
Data Scientist, ITA	Data & Reporting	3
Product Owner	Product	2
Strategic Account Manager	Account Management	2
Account Coordinator	Account Management	1
Data Analyst	Enterprise Data	1
Data Steward	Enterprise Data	1
Facilities & Security Operations Associate	Facilities & Admin	1
Human Resources Business Partner	Human Resources	1
Implementation Analyst	Project Management Org	1
Manager, Implementation Analyst	Project Management Org	1
Manager, Software Engineering	Development	1
Other titles (9, 1 each)*	across 6 departments	9
Total		30

Key takeaway: Project Management Org holds 9 of the 30 open reqs (30%), with Implementation Manager and its analyst variants making up 8 of those. Product and Data & Reporting each carry 4, Development and Account Management 3. Hire reason splits 13 new against 17 replacements (12 termination backfills, 4 mobility backfills, 1 internal transfer), so a little over half the list replaces existing headcount. Delivery is remote-first: 23 of 30 are Remote - US, 5 hybrid and 2 onsite.

Source: the OPEN nonHUB tab, 30 non-billable rows carrying 30 openings. Department is taken from ADP Department : Name. Hire Type splits as New 13, Backfill - Termination 12, Backfill - Mobility 4, Internal Mobility - Transfer 1. Titles shown as recorded. Other titles folded into the final row: Procurement Specialist, Product Manager, QA Lead Data & Reporting, Release Coordinator, Salesforce Architect, Senior Implementation Analyst, Software Engineer III, Tech Lead, Vice President, Insights to Action.

All departments	241	\$49.79	\$480,024	\$24,961,227	\$27,676,569	9

Carried forward from the August 31 spend report; no contractor file accompanied this week's export. The 241 priced contractors span 14 home departments. Median months reflects current assignment tenure. Hours are modelled at 40 per week and are not measured against timecards.

Key takeaway: Carried forward unchanged from the August 31 spend report — no contractor file accompanied this week's export. 241 priced contractors carry a \$480,024 weekly run-rate, annualising to \$24.96M against \$27.68M already spent to date. Development alone is 77 seats and \$7.67M annualised, nearly a third of the total. Two concentration risks persist: Infrastructure & Telecom runs 2 seats at \$242.00 an hour, the highest rate on the sheet, and Product shows a 38-month median tenure against a 9-month median overall.

*Hours are based on a 40-hour week and are not measured against timecards. Avg Hourly, Weekly and Annual are therefore modelled run-rates, not billed amounts; Spent to Date is actual. Annual = weekly x 52. Median Mo is the median current assignment tenure in months. Figures cover the 241 priced contractors only; contractors without a rate on file are excluded. This page is carried forward from the August 31 spend report — no contractor data accompanied the September 8 export.
